

OMNERO WRITING GUIDE

USING OMNERO WRITE

A quiet guide to writing, backing up
and taking your work with you

THE IDEA

Open Omnero. Choose a project. Write. The software
should disappear behind the page.

OMNERO WRITE

A quiet place to write. • September 2026 edition

READ THIS FIRST

What this guide is for

Omnero Write is deliberately small. A useful guide should explain the few things that matter, then get out of the way.

The writing should be the most important thing on the screen.

Use Omnero for first drafts and long-form work: the part before editing systems, publishing tools and AI assistants. It does not need to become the place where every part of the writing life happens.

THE BOUNDARY

Omnero does not finish sentences, rewrite paragraphs or place a chatbot beside the page. There are plenty of tools for that. The page stays quiet. You write.

This guide focuses on four things: beginning quickly, keeping the page comfortable, protecting local work, and taking your writing with you when you are ready.

QUICK START

From opening Omnero to writing

- 1 Open Omnero Write in your browser or installed app.
- 2 Create a project, or open one you already recognise.
- 3 Give a new project a simple name. Do not build a system around naming.
- 4 Write. Autosave happens locally as you work.
- 5 Use Focus Mode when even the remaining interface is unnecessary.
- 6 Export or back up important work regularly.

THE SIXTY-SECOND RULE

You should be able to move from opening Omnero to writing the first sentence in roughly a minute. If you are still configuring, you are probably doing too much.

A project is simply the container Omnero uses to hold your writing. The writing is the point.

PROJECTS

A working shelf, not a dashboard

The Projects screen exists so you can find your writing and return to it. It is not intended to become a planning system.

- Create a project when a piece of writing deserves its own space.
- Name it for recognition, not ambition.
- Open recent work and continue where you left off.
- Rename or duplicate only when the writing genuinely needs it.
- Delete carefully. Export what matters first.

NAME FOR RECOGNITION

“Coastal House Draft” is more useful than “Novel”. A project title is an entry point, not a marketing decision.

Omnero deliberately avoids project types, status systems, deadlines, tags and progress dashboards. The shelf should remain simple.

The page is the interface

The editor is intentionally plain. Project title and minimal navigation live around the edges. Your writing occupies the centre. Saving happens locally as you work.

Formatting is not the work at this stage.

Write paragraphs. Use simple headings and line breaks when they help. Avoid building a formatting system for a draft that still needs to become itself.

- Selection, copy, paste, undo and redo remain ordinary tools.
- Spellcheck and normal text-entry behaviour remain useful.
- Word count can be shown or hidden.
- The editor menu stays out of sight until you need export, backup, Earlier Versions, Focus Mode, project details or settings.

Make the page comfortable

Omnero provides a small number of appearance controls because readability matters. The mistake is treating them as endless design decisions.

- Typeface: Serif, Sans or Mono.
- Text size: choose what is easy to read at your normal writing distance.
- Spacing: increase or reduce it until paragraphs feel comfortable.
- Width: narrower can suit sustained prose; wider can suit notes and fragments.
- Word count: show it if useful; hide it if it becomes noise.

APPEARANCE

Paper for everyday writing. Night for lower-light sessions. E-Ink for high-contrast, low-distraction displays.

Make the page comfortable. Then forget about the interface and write.

FOCUS MODE

When the page is enough

Focus Mode is the closest Omnero gets to a writing ritual. Navigation disappears. Menus disappear. The page remains.

- 1 Open the project and return to the exact point where you stopped.
- 2 Read only enough previous material to recover the voice or argument.
- 3 Enter Focus Mode.
- 4 Write forward.
- 5 Leave Focus Mode whenever you genuinely need another part of the application.

NO PURITY TEST

You do not fail because you leave Focus Mode. It exists to lower friction, not to turn concentration into a performance.

Just writing.

Think of Omnero as a desk, not a vault

Your writing is stored locally on the device you are using, in your browser. Omnero does not require an account and does not upload your writing while you write.

Omnero is the desk. Your backup location is the vault.

Local-first gives you control, but it also gives you responsibility. Clearing browser or site data, resetting a device, or losing access to the browser can remove the local copy.

- During the session: let Omnero save locally.
- After meaningful work: export or create a project backup.
- At milestones: keep a dated copy somewhere outside the browser.
- Before clearing data, changing devices or reinstalling software: export first.

BACKUP

Protect the writing without managing it

A backup is not a productivity habit. It is simply a second copy of work that matters.

- 1 Keep the live Omnero project as your working copy.
- 2 Export important writing as text or Markdown when you want a readable external copy.
- 3 Use Project backup when you want an Omnero backup that can preserve the project for later import.
- 4 Keep at least one important copy outside the browser and, for work you cannot afford to lose, in a second location.

A QUIET RHYTHM

Back up after substantial sessions, before major changes, and before risky browser or device maintenance. You do not need to make backup itself into a system.

EARLIER VERSIONS

Recovery, not a record of you

Omnero keeps earlier versions so substantial changes do not have to feel dangerous. They are there to help you recover writing that existed before.

- Open Earlier Versions from the editor menu.
- Choose a version by its date, time and approximate word count.
- View the earlier writing before deciding what to do.
- Make a copy when you want to preserve both directions.
- Restore when you want that earlier version to become the active project again.

THE POINT

Earlier Versions are for recovery. They are not an authorship record, productivity score, writing history dashboard or proof-of-work system.

Use the feature when you need it. Otherwise, leave it behind the writing.

Your writing should be able to leave

Omnero should not trap your writing. Export is the bridge between the drafting stage and everything that follows.

- Export text when you want a simple, widely readable copy.
- Export Markdown when lightweight plain-text structure is useful.
- Create a Project backup when you want an Omnero-oriented backup.
- Import existing writing when you want to continue working on it in the quiet editor.

KEEP THE ORIGINAL

When importing work from elsewhere, keep an untouched copy of the original file. Omnero is a drafting environment, not a layout-preservation tool.

For important exports, use names you can understand later: a date, milestone or draft state is usually enough.

Move between devices deliberately

Omnero does not use an account-based cloud sync system. A project on one device does not automatically appear on another.

- 1 Export a fresh copy or backup on Device A.
- 2 Move the file using a method you trust.
- 3 Import it into Omnero on Device B.
- 4 Check the beginning, end and paragraph structure.
- 5 Treat Device B as the active copy until the next deliberate handoff.

AVOID DIVERGING COPIES

Two local copies can quietly become different pieces of writing. Decide which device is active and transfer the newest copy before switching again.

RETURNING

Make tomorrow easy

Long-form writing depends less on heroic sessions than on being able to return. Omnero helps by keeping the path back short.

- Leave the cursor near the point where you will continue.
- If useful, leave a short bracketed note about what comes next.
- Do not clean every rough edge before closing.
- When you return, read only enough previous material to recover context.
- Use placeholders when research or missing detail would otherwise pull you away from the page.

A USEFUL PLACEHOLDER

[CHECK DATE] [NAME THIS STREET] [SOURCE
LATER] [BETTER EXAMPLE]

The page stays quiet. You write.

Protect the writing first

If anything about the app, browser or device makes you uncertain, preserve the writing before you troubleshoot the software.

- Do not clear browser or site data yet.
- Do not uninstall the app or browser yet.
- Open the project if it is still accessible.
- Export the writing or create a project backup immediately.
- Copy that export somewhere outside the device if possible.
- Only then troubleshoot the application.

IF A PROJECT IS MISSING ON ANOTHER DEVICE

That is expected in a local-first system. Export from the device containing the current copy, move the file, and import it on the other device.

Writing first. Application second.
Settings third.

QUICK REFERENCE

The Omnero Write protocol

- 1** Open the project.
- 2** Read only enough to return.
- 3** Write forward.
- 4** Use placeholders instead of leaving the page.
- 5** Enter Focus Mode when the interface is no longer useful.
- 6** Stop with a small bridge into the next session.
- 7** Export important work.
- 8** Keep a backup outside the browser.
- 9** Use Earlier Versions when you need recovery.
- 10** Move the writing into another tool when the next stage genuinely requires it.

REMEMBER

Omnero is for the part where you write.

FINAL NOTE

Keep the page quiet

The easiest way to misuse a simple writing tool is to build a complicated system around it.

You do not need perfect settings. You do not need a streak. You do not need a dashboard. You do not need to inspect your history instead of writing.

You need somewhere to write.

A project you recognise. A page you can return to. A reliable copy outside the browser. Enough quiet to put one sentence after another.

Omnero Write is deliberately incomplete because the writing stage is incomplete. Editing, collaboration, layout, publishing and other tools can come later, when the work actually needs them.

First it has to exist.

Open Omnero.
Choose the project.
Write.
